

THREE CYCLE IVF PACKAGE

Many couples who are advised to consider IVF treatment confine themselves to only one cycle of IVF treatment. The main reasons are financial, as well as the physical and emotional burden and the commitment of time involved.

We, at the London Women's Clinic, feel that IVF needs to be simplified to make it less stressful and financially more affordable.

To facilitate the idea of IVF as a multiple cycle treatment we consider that the three cycle package can be of benefit for many couples.

Cost

As opposed to the single cycle treatment cost of £2,750, the three cycle package is at a fee of £5,450 per course of 3 treatment cycles of embryo transfer over 12 months.

Please note that a successful pregnancy (beyond 12 weeks) during the 1st/2nd treatment cycle does not lead to a part refund of the fees.
(This does not include medication, investigations, HFEA licence fees or additional treatment e.g. donor sperm, ICSI etc if required)

Success rates for IVF treatment vary according to a large number of factors; however, success is more likely to be achieved if couples regard IVF as a course of treatment rather than a one-off attempt.
