

What are my chances of conceiving with IVF?

Complete your fertility assessment at London Women's Clinic and you will receive access to your personalised Univfy PreIVF Report at no additional cost, because we believe in giving you accurate and personalised statistical information for your best chance of having a baby. The report analyses your comprehensive health data along with London Women's Clinic's own live birth data to give you highly individualised chances of IVF success, which are proven to be more accurate than age-based estimates. We are proud to offer this level of transparency and personalisation in counseling our patients.

The Univfy PreIVF Report analyses many factors together:

- ✓ Age
- ✓ Body Mass Index
- ✓ Ovarian reserve test results
- ✓ Reproductive history
- ✓ Clinical diagnosis

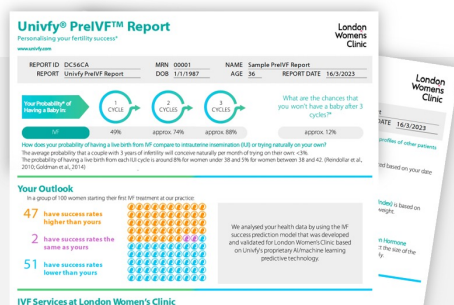

Inside your personalised Univfy PreIVF Report, you will discover:

- ✓ Your probability of having a baby in 1, 2 and 3 IVF cycles
- ✓ How chances with IVF compare with IUI or no treatment
- ✓ Individual factors that impact your chances of success with IVF

Knowing your probabilities of IVF success helps you and your fertility specialist navigate a course of treatment that maximises your chances of having a healthy baby in the most cost-efficient manner.

Receive your free, personalised report after fertility assessment

Founded by Stanford University researchers, Univfy uses a rigorous scientific process to custom-develop and validate a prediction model for London Women's Clinic patients.

"Univfy's prediction models actually show more than 60% of the women who use them have a higher probability of IVF success than their age-based estimates alone suggest... I'm Ms. Prepared, so I like the idea of being realistic about what your chances of getting pregnant might be, because IVF always seems to be the great unknown."

-- Patty Adams Martinez, Parents.com
